Approximately 30 mice of each sex were obtained at weaning (BD +/- 1 day) from production rooms individually identified and weighed the same day every week. The mice were fed a diet containing 6% fat ([LabDiet® 5K52/5K67](#)) from weaning at 3 weeks until 16 weeks of age.

For 8 week data, mice of each sex were obtained at 8 weeks of age (BD +/- 3 days) from production rooms. For 16 week data, mice of each sex were obtained at weaning (BD +/- 1 day) from production rooms and maintained until .16 weeks of age. All measurements are non-fasted values.
